

Design of recipes

Entrust us with the development of your sterilised products

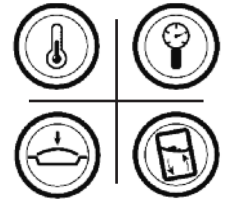

- R&D expertise in “long life” products on your site
- Simultaneous development of recipe and thermal scale
- Efficient project management with experimental designs

INDUSTRIALISED

Design of recipes

Entrust us with the development of your sterilised products

Aim

Develop sterilised products
with dual competence in materials and scales

Methodology

Introduction:

- Joint development of specifications: definition of needs and constraints (legislation, equipment in place, marketing target)
- Construction of schedule structured in validation stages

Test phase:

- Selection of ingredients supporting sterilisation and ageing
- Definition of experimental designs (Taguchi type)
- Test management: sampling, adjustment of scale and batch production
- Analysis and interpretation of results

Validation process:

- Organisation of sensory tests
- Monitoring of progress against initial timescale

Commitments

Contractual confidentiality and use of your data
restricted to resolving your issues

Provision of intermediate reports and a summary report
at the end of operations

Transfer of skills to enable autonomous
management of future developments

Guaranteed integrity of your packaging
