

Power saving

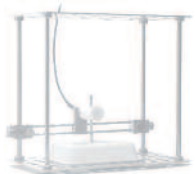

Reduce your power consumption

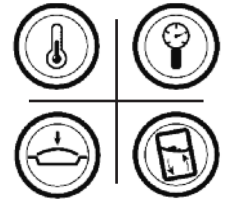

- Reduction of instantaneous steam requirements
- Reduction of additional compressed air
- Improvement of cooling efficiency

MONEY SAVING

Power saving

Reduce your power consumption

Objective

Energy savings
achieved by adapting your scales

Methodology

On-site evaluation: instrumented monitoring
with usual scale and autoclave with full load

Study of regulation parameters

Test phases:

1 to 3 scale upgrades (partial load)

Correction of regulation parameters

Optimised scale validation:

Control of the new scale and check of objectives
with autoclave with full load

Commitments

Quick set-up of applicable arrangements:

1 to 3 days per scale

Extensive report including:

Results achieved in relation to objectives set

Fo / Po validation

for all programme modifications

Guaranteed packaging integrity

Advice for adaptation of optimised programmes to your
futures recipes

No major investment in equipment
