Treatment in

Autoclave

O.T.T.A.

We boost the efficiency of your retorts

Objective

Develop an efficient and validated industrial schedule

Quantify productivity gains

Validate the quality gain on your recipes

Methodology

On-site evaluation: instrumented monitoring with the usual schedule and a retort fully loaded

Test phase: 1 to 3 partial load schedule evaluations

Validation of the optimized schedule and verification of the objectives with a retort fully loaded

Commitments

Quick implementation of 1 to 3 days adjustment per schedule

PU or Fo validation for any final schedule

Verified integrity of your packaging

Provision of a complete report including objective, context, conclusion by product and annex file

Advice on adapting these new schedule to your future recipes
