

Elimination of geometric defect

We avoid deformation of your packaging

mm
inch
bar
psi

Guarantee the geometry and performance of your packaging

Rapid implementation of development

Validation of F0 or PU for any established change in retort process

Elimination of geometric defect

We avoid deformation of your packaging

Objective

Avoid irreversible deformation of your packaging

Adjustment of the retort programme with constant F0/PU

Consideration of temperature behaviour of materials

Commitments

Rapid implementation of changes

Ensuring the integrity of your packaging

Transfer of skills for autonomous use of your deflection kit (purchase or rental)

F0 validation for any modification of the retort process

Methodology

On-site evaluation

- ⇒ Packaging instrumentation with our P&P Box deflection (temperature, pressure, deformation)
- ⇒ Follow-up of a standard retort process at full load
- ⇒ Analysis of information

Test phase

- ⇒ Development of a new retort programme
- ⇒ Check deformation packaging with modified process

Validation process

- ⇒ Development of the adapted process with a partial load
- ⇒ Confirmation of results with a retort in full load
