

Productivity gains

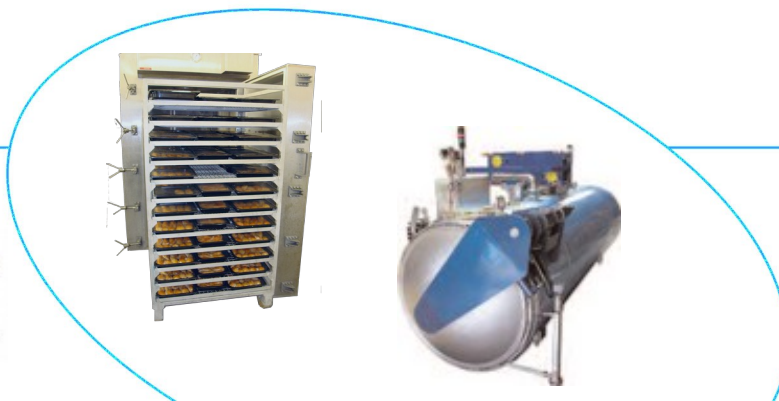

We improve the profitability of your retorts

Elimination of sorting and waste

Reduction of process time

Guaranteed repeatability of cycles = optimized management

Productivity gains

We improve the profitability of your retorts

Objective

Define a specific production framework to obtain a shorter and perfectly repeatable process

Garantee the F0/PU target while reducing thermal dispersions

Explain areas for possible improvement

Commitments

Quick implementation of arrangements

Guaranteed integrity of your packaging

Transfer of know-how by explanation of all changes

F0 / PU validation for all new finalized processes

Methodology

Exchange on the organisation of the sterilisation room
⇒ recipe management / launch of run ...

Identification of limiting points
⇒ filling conditions / loading plan / program / power of energy networks / retort operation ...

Testing and analysis of several part-load retort programmes

Check the time saved and the F0/PU obtained with a full load and the finalized process
