Holding device for temperature and deflection probes

Insertion in static or rotary retort

For all packaging materials and geometries

Universal mount

Choose the support for all your wired probes

Specificities

- Modular design** for all packaging
- Fastening** of packaging by clamping or gluing
- Maintains** deflection probe as such temperature probe
- Fully** maintenance free

Applications

- In static or rotary** retort (option)
- Core temperature** monitoring for plastic packaging
- Deformation monitoring** of flexible packaging
- Quality** control and R&D development
- In combination** with AXITHERM's P&P Box

Performances

- No disturbance** on measurement made
- Allows** to measure the deformation of the packaging on all these sides
- Ensures** that the temperature probe is kept at the product cold spot
- Accepts** several probes at the same time (ex: 2 deflections and 2 temperatures)
- Duplication** of the tray for very large packaging (ex: 5 kg bag)
- Lightweight** and easy to disassemble
- All stainless** steel construction
